Project Background

This project is about making a web application for Cleaning Service Malaysia.

Problem Statement

Cleaning Service Malaysia having a problem with online booking for their cleaning services. The problem when they have to handle lot of online booking. Before this they only using the traditional way, which is write down every booking on a book and sometimes, they write the wrong date for each customer. So, they decide to upgrade their system to fully online to keep on update for each customer.

Objectives

The objectives in this project are:

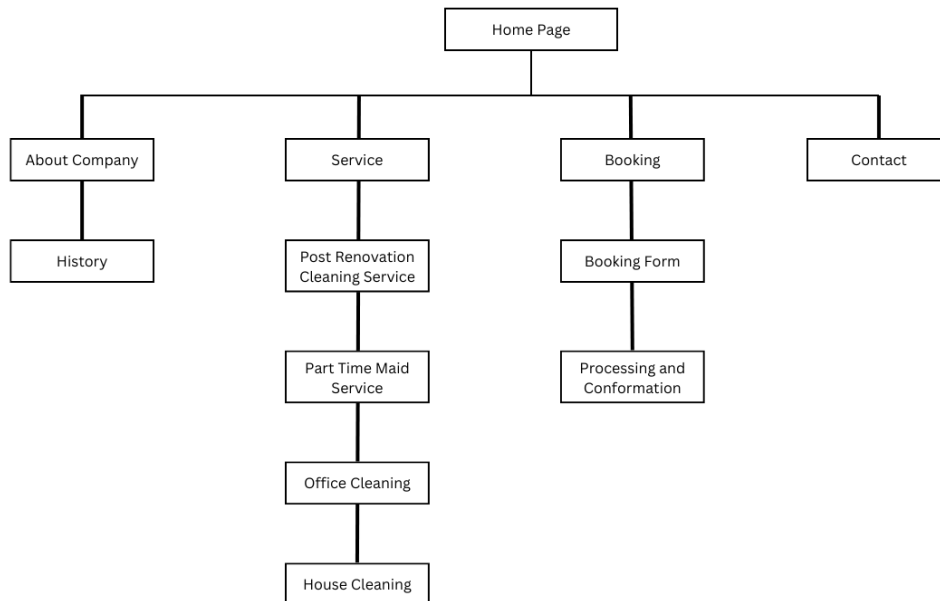

1. The website must have homepage, about us page, booking page, contact us page and cleaning services page.
2. Customer can choose what type of cleaning service they want such as home cleaning, part time maid, office cleaning and post renovation cleaning.
3. Customer also can choose date that they wanted for the cleaning service.
4. Customer can input their personal data such as name, phone number, ic number and their home address.
5. The admin can check the customer data, search the data, update and delete the data in admin site.

Target User

The target users for this web application are:

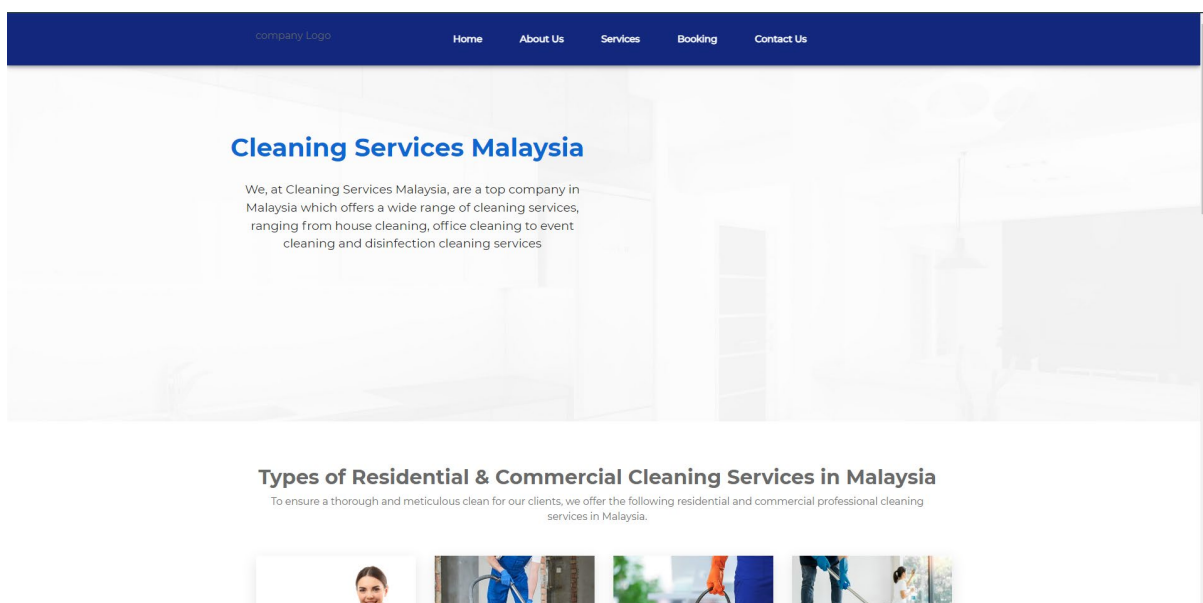

- Cleaning service customers
- Admin

Site's Organization

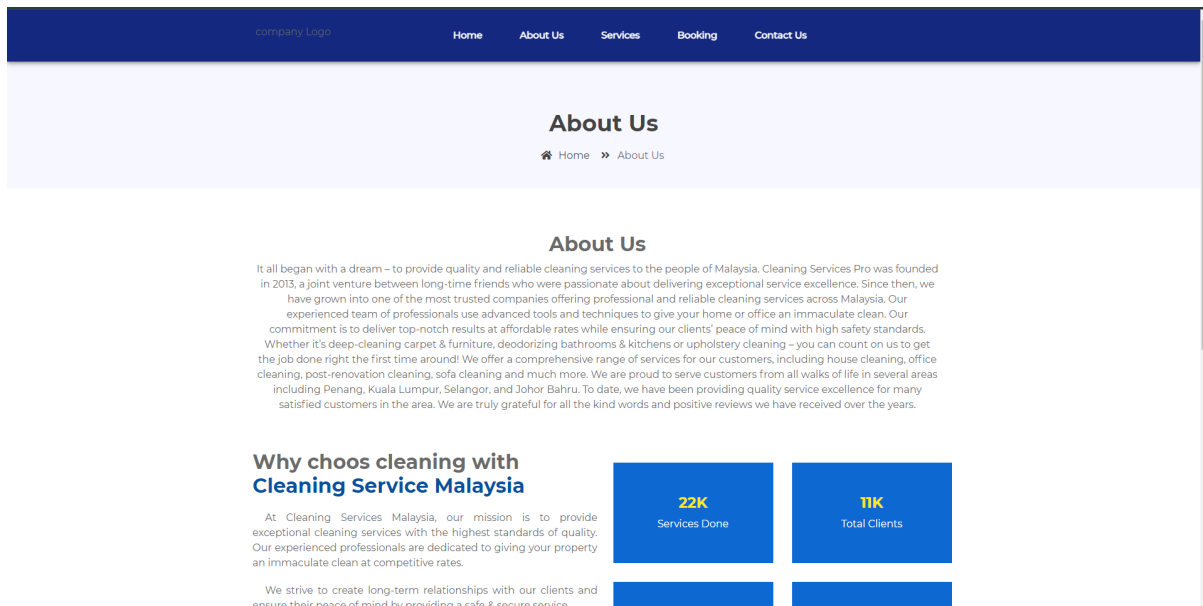

Screenshot of the website

This are customers site website

This is the home page for the website

This is about us page that contains the history of the company. There are also shows how many customers has stratified with the cleaning service of the company.

This page shows what type of cleaning services that being offered
